

New Workflow for Psych ED patients

Mini-Reg, Triage, B-Area:

- Psych ED patients will come in through Medical ED.
- **Med ED Clerk** at greeter desk will be responsible for performing a **mini-reg in Unity** for all patients who present to the ED, regardless of the nature of their chief complaint (psychiatric or medical). **Greeter Nurse** will document **Patient Arrival Note**.
- **Greeter Nurse** will assign ED team in **Assign Team Note**
- Patient will be assessed for any emergent care needs (ESI: 1,2,3). If acute medical care is required patient will remain in ED until **Medically Optimized**
- In triage, the **Triage Nurse** will determine if a patient should be sent to Medical ED, Fast Track, or Area- B, and indicate this with the **ED Triage Note** in the new "Triaged to" field. When a patient is triaged to Psych ED, the **Area –B nurse** will contact Registration Supervisor to convert clinic code from current (000, 001, 008) to 003.
- Once the **ED Triage Note** is completed with "Triaged to" field = Psychiatry, the patient will appear on the **Psych ED Whiteboard**.
- A **Psych ED Nurse** and hospital police can come to pick up the patient from triage.

Workflow in PES:

- Once in Psych ED, the **Psych ED Nurse** will view the **PES whiteboard** to obtain the MRN and correct visit number for the patient. He/she will then open the patient's correct visit in QuadraMed (select visit number as it appears on the **PES Whiteboard**) to document their notes.
- The **Psych ED Nurse** will evaluate the patient and then document the **PES RN Comprehensive Assessment** on the correct patient visit. This note includes a field to document the "Arrival Time to Psychiatry" which should be the time the pt entered the Psych ED after triage.

Disposition documentation (required for ALL Psych ED Patients before leaving Psych ED):

- The **Psych ED Physician** must write **PES Disposition Note** for every patient visit to document the final course of action. The **PES Disposition Note** has the following options for disposition documentation:
- **Discharge/ Release:** For patients being discharged from the ED. The **PES Disposition Note** will replace the old **MD Discharge Note**. Once documented, this note will automatically trigger a "Discharge Instructions Report" to print for the patient (report copies are be signed by patient and clinician (two) – one copy goes to patient, one goes in chart)
- **PES Nurse** will document the **Discharge Summary Note** before patient leave Psych ED.
- **Admission:** When a decision is made to admit a patient to an Inpatient floor, the physician will complete this note (this note will replace the "Admit Order"). **PES Disposition Note** will include choices to identify if the patient is being admitted to a Psychiatric Inpatient Unit or Other Medical (non-psych) unit
- Note: The **PES Nurse** will document a **Transfer Summary/SBAR** for patients being admitted to an inpatient unit.
- **Transfer** (to another facility): Used if a patient will be transferred to an inpatient unit at another facility. Includes options to identify if the patient is being transferred to another Inpatient Psychiatric Unit (state or non-state psychiatric unit), or to another Inpatient Medical Care facility.
- **Left During Evaluation / Eloped:** This option can be used if a patient elopes from the Psych ED during their stay, giving the physician the option to explain the circumstances of the elopement.
- **Expired:** This option is available for documentation if a patient expires in the Psych ED.

When a patient is leaving Psych ED:

Originator: Marc Guillaume
Department: Central Office CIS
Last Revised: Nov. 2012

- A **Remove From Whiteboard Note** must be written by a **PES Nurse** for all patients immediately after the patient leaves Psych ED at the END of their visit. The **Psych ED Nurse** should document the exact time of the patient's departure from Psych ED in this note, as this time will be used for reporting purposes.

If a patient from Psych ED must be sent to the Medical ED for medical within their Psych ED visit:

- **Medical ED Nurse** checks patient in to Medical ED bed location (**Check In function**)- this puts patient on the **Med ED whiteboard**. Patient will also remain on the **Psych ED whiteboard** to keep track of the patient.
- **ED Nurse** document "Assigned Team" Note. Pt. appears on BOTH Medical ED Whiteboard and Psych ED Whiteboard. Pt. location is indicated on both Whiteboards.
- The patient does NOT need to be re-registered as a medical ED patient and does NOT need to be re-triaged.
- The Medical ED documentation should be on the same visit in QuadraMed as the current Psych ED visit. (Note: The **Medical ED Disposition note** will include a field that will appear if a patient has a Psych clinic code, which will help alert the **Medical ED Provider** to send the patient back to Psych ED and/or contact the Psych ED physician before admitting/ discharging the patient.)
- When patient is finished in Med ED, the **Med ED Clerk** should NOT discharge the visit, as patient should be escorted back to Psych ED to complete their visit/ evaluation.
- When the patient returns to Psych ED, the **ED nurse** will document the "Assigned Team" Note (this will remove the patient from the **Medical ED whiteboard**). The **Psych ED Nurse** will then complete another **Assignment note** to document the patient's Re-entry time to Psych ED.

Adding a patient to the Psych ED Whiteboard:

- Patients are added to the **Psych ED Whiteboard** when patient with "Destination" field of Triage or Assign Team note = "003 Psychiatry" in the **ED Triage Note** with "Triaged To" field = Psych ED. (Pts. will remain on WB until criteria has been met to remove them. IP pts. stay on WB until they physically exit PES and 'Remove from WB' (exit) note is documented)
- If, in rare occasions, a patient is admitted directly to Psych ED or has been triaged to/seen in the Medical ED before being sent to Psych ED, the patient will not be on the **Psych ED Whiteboard**. The **Medical ED Clerk** must perform a **mini-reg** in Unity to open the visit (if this has not already been done), then the **Area-B Nurse** will document the **PES RN Assessment/Re-assessment**, and fill in the "Triaged to" field = Psychiatry. Once this note is accepted, the patient will appear on the **Psych ED Whiteboard**.

Removing a patient from the Psych ED Whiteboard:

- The patient will be taken off the **Psych ED Whiteboard** as soon as the **Remove from Whiteboard/Patient Exit Note** Note has been documented, as long as all of the required documentation is completed on the correct visit in QuadraMed. Required documentation includes:
- **PES RN Reassessment/Evaluation**, **PES Assessment**, and **PES Disposition Note**
- These notes must all be completed (not partial), and the **PES Assessment** and **PES Disposition** notes must be VERIFIED by an attending if documented by a resident.
- **Exceptions:** If patient is gets a disposition of "Left During Evaluation/Eloped or Expired (and one of these disposition options is selected in **PES Disposition Note**), then the patient can be taken off the whiteboard without the **PES Assessment** documented (since expired patients might have incomplete documentation).
- If a patient has a **Remove from Whiteboard** note documented, but is missing required documentation, then the patient will be highlighted in GRAY on the **Psych ED whiteboard** to indicate that they have left but still need documentation completed.

Key: Purple = Clerical functions	Green = CPEP Nurse Functions Blue = Medical ED Clinician Functions	Orange = CPEP Physician Functions Red = Whiteboards
